

Dual Operational Amplifier for Audio

Features

• Operating Voltage: ±1.5~±8V or 3~16V

• Large DC Voltage Gain: 100 dB

• High input Resistance :0.8M Ω

• Low Input Offset Voltage:0.7mV

• Bandwidth(unity gain):3MHz

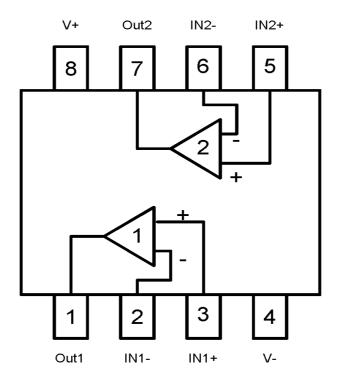

• Bipolar Technology

Description

The AT4558 consists of two independent, high gain, internally compensated amplifiers which were designed specifically to operate from a single or split power supply.

Application areas include transducer amplifier, DC gain blocks and all the conventional operational amplifier circuits. The AT4558 can be directly operated +5V power supply, which is normally used in digital systems.

Dual Operational Amplifier for Audio

Absolute maximum ratings (Ta = 25°C)

Parameter	Symbol	Limits	unit
Power supply voltage	V+/V-	±8	V
Diffeential Input Voltage	V_{ID}	±14	V
Input Voltage Range	$V_{\rm IN}$	±7	V
Power Dissipation	PD	500	mW
Operating temperature	T _{opr}	0~+85	°C
Storage temperature	T_{stg}	-55~+150	°C

^{*}Stresses beyond those listed under " absolute maximum ratings" may cause permanent damage to the device. Exposure to absolute-maximum-rated conditions for extended peeriods may affect device reliability.

Application Circuit

MIC Pre-Amp circuit for ECHO Application

- Change the value of the R and C to adjust the cutoff frequency of the high pass filter as you like.
- The output is connected to the input point of the echo application circuit.
